

4th week	Development of the facial prominences
	Development of the Nasal (Olfactory) placodes
	Tracheoesophageal ridge becomes a septum (TES)
	Formation of the laryngotracheal groove (Lung bud)
5th week	Formation of the medial and lateral nasal prominence, nasal pits (from the placodes)
	Bronchial buds enlarge to form the Right+Left main bronchi
6th week	Formation of the palatine shelves (pointing obliquely and downwards)
	Deepening of the nasal pits
7th week	Formation of the palatine shelves (pointing medially (horizontally))
8th week	Union of the 2 folds which will form the soft palate
11th week	Fusion of 2 parts which will form the uvula

Notes:

During weeks 6 and 7, the maxillary prominences continue to increase in size medially pushing the medial nasal prominences.

Good Luck!
